

Overview

QT Office needs a complete banking workflow where:

1. **Admins can create banks** and corporations with all required bank and return address fields.
2. **Super Admin can upload and assign digital signatures** to banks based on the signature name saved by admin.
3. **Add User page must show all unassigned bank accounts** allowing admins to assign store accounts to a user.
4. **Cheques printed must automatically include:**
 - Bank information
 - Correct return address
 - Correct digital signature assigned by super admin
 - Auto-incrementing check numbers

This PRD defines the logic, workflows, UI behavior, data structure, API requirements, roles & permissions, and validation rules.

2. Roles & Permissions

Super Admin

- Can view, edit, or delete any bank
- Can assign digital signatures
- Can view all users

- Can assign banks to users
- Can manage corporations
- Can upload signature PNG/JPEG

Admin

- Can create banks
 - Can create corporations
 - Can assign banks to users
 - Cannot upload or manage signatures
 - Cannot access super admin panel
 - Cannot overwrite signature assigned by super admin
-

3. Add Bank Workflow

3.1 Mandatory Fields

Field	Description
Bank Name	Official bank name
DBA (Store Name)	Store name used for cheques
Account Name	Name on bank account
Routing Number	Routing
Account Number	Bank account
Account Type	e.g., Checking (dropdown)

Signature Name Placeholder	Example: Pasang Lama
Return Address (1,2)	Address lines
City	City
State	State
Zip	Zip Code
Corporation	Selected/created corporation

3.2 Required Validations

- All fields above are required
- Routing number must be 9 digits
- Zip must be numeric
- Account number must be numeric
- Duplicate DBA must be prevented

3.3 Business Logic for Add Bank

- When a bank is created, it is stored in **banks** table.
- Bank initially has:

```
assignedToUserId = NULL
signatureImagePath = NULL
checkNumber = 0
```

- Super Admin later assigns the actual PNG/JPEG signature.
-

4. Corporation Management

4.1 Required Fields

Field	Description
Corporation Name	Legal business name
Owner	Owner name
EIN	Employer Identification Number

4.2 Logic

- Corporations are stored in `corporations` table.
 - New corporations can be created via “Add New” from Add Bank page.
 - A corporation may have multiple banks assigned.
-

5. Digital Signature Assignment (Super Admin Only)

5.1 Logic

Each bank has a `signatureName` field.

Example: "`Pasang Lama`"

Super Admin will:

1. Go to Signature Management Page
2. See a list of signature names needing signatures
3. Upload a PNG/JPEG signature file
4. The signature file gets linked to the bank

5.2 Data Model

Field	Type	Description
signatureName	text	Placeholder name (admin-provided)
signatureImagePath	text	Link to uploaded signature image
assignedBy	uuid	Super admin ID
assignedAt	timestamp	When signature was assigned

5.3 Business Rule

- Only Super Admin can upload a signature.
 - If signatureImagePath exists → Admin cannot modify.
-

6. Add User → Unassigned Accounts Section

6.1 Purpose

When creating a user, admin must assign stores (DBA accounts).

This section automatically shows **all banks that are not yet assigned to any user.**

6.2 Display Structure

Each row shows:

[checkbox]

DBA Name

Account Type

Bank Name

6.3 Logic

Fetch all banks where:

```
assignedToUserId IS NULL
```

6.4 After selecting accounts

When admin saves the user:

```
assignedToUserId = newly_created_user_id
```

6.5 Search Functionality

- Search by DBA Name
 - Search by Account Type
 - Real-time filtering
-

7. Cheque Printing Logic

7.1 Inputs pulled from database

From Bank Table	Used For
bankName	Display
dbaName	Display
accountName	Display
routingNumber	MICR line
accountNumber	MICR line
returnAddress	Envelope & Printed
signatureImagePath	Printed signature

checkNumber Auto-increment

7.2 Auto-increment Check Number

When a cheque is created:

```
checkNumber = checkNumber + 1
```

(Stored per bank)

8. Database Schema Overview

8.1 Banks Table

```
id (uuid)
bankName
dbName
accountName
routingNumber
accountNumber
accountType
signatureName
signatureImagePath
address1
address2
city
state
zip
corporationId
assignedToUserId
checkNumber (default 0)
createdAt
updatedAt
```

8.2 Corporations Table

```
id (uuid)
corporationName
owner
ein
createdAt
updatedAt
```

8.3 Users Table (relevant fields)

```
id
name
role (admin/superadmin)
email
password
createdAt
updatedAt
```

9. API Requirements

GET /banks/unassigned

Returns all banks with no assigned user.

POST /banks

Create new bank.

POST /corporations

Create corporation.

POST /signatures/upload

Super Admin uploads signature.

POST /users/:id/assign-banks

Assign banks to user.

10. UI/UX Requirements

Add Bank Page

- Two-column layout: Bank Information + Corporation
- "Add New Corporation" modal appears when selected
- All fields required except address2

Super Admin Signature Page

- List view: each bank needing signature
- Upload button
- Preview before save

Add User Page

- "Unassigned Accounts" section
 - Search bar
 - Select all checkbox
 - Scrollable list
-

11. Acceptance Criteria

Admin Creates Bank

- All fields must be validated
- Saved successfully
- Bank appears in Unassigned Accounts list

Super Admin Assigns Signature

- Can upload PNG/JPEG
- File stored and linked
- Appears during cheque printing

Add User

- Shows all unassigned banks
- Allows selecting multiple
- Upon saving user → selected banks are assigned

Cheque Printing

- Correct bank info
- Correct digital signature
- Auto-incrementing check numbers
